

# DANIEL RODKEY, M.D.

## BOARD CERTIFIED ORTHOPAEDIC SURGEON

### RECOVERY GUIDE FOR: TOTAL KNEE ARTHROPLASTY

#### OUR GOAL:

Relieve pain, restore knee function, improve mobility, and help you return to the activities you love.

### KEY POINTS

#### Activity:

Weight bearing as tolerated. You may put weight through extremity but will need walker/crutch while you build strength.

#### Motion:

You may move as tolerated. Work on early motion, especially full extension (straight leg).

#### Wound Care and Bathing:

You should keep bandage on for at least 1 week unless it becomes wet. Reinforce dressing so it does not get wet and shower after postop day 3. Call clinic if it becomes wet.

#### Early Knee Motion:

Do not place pillow underneath your knee. Place pillow underneath ankle and let knee "float" Goal for full extension by 1-2 weeks. Full flexion by 6-8 weeks.

### YOUR RECOVERY TIMELINE

#### PHASE I 0 – 2 WEEKS

**Focus:** pain and swelling control, walking daily

#### Goals:

- ✓ Walk the same day of surgery with walker
- ✓ Work with therapist  
Ice, Pain control

#### Activities:

- Knee extension to 0°!
- Gait training/Balance
- Knee Flexion to 90°

#### PHASE II 2 – 6 WEEKS

**Focus:** normal walking gait

#### Goals:

- ✓ Knee extension 0°  
Knee flexion >90-110°
- ✓ Keep walking daily  
Discontinue narcotic

#### Activities:

- Knee extension!
- Stationary bicycle
- Quad/mini squats

#### PHASE III 6 – 12 WEEKS

**Focus:** Improve balance, build strength

#### Goals:

- ✓ Wean crutch. Walk in home without crutch
- ✓ Hip flexion to 90°  
Socks/Shoes

#### Activities:

- Body squats, SLR
- Stationary bicycle
- Scar massage

#### PHASE IV 3 – 6 MONTHS

**Focus:** return to all activities, independence

#### Goals:

- ✓ Walk long distances  
Knee flexion 115-125°
- ✓ Improve stamina  
Improve strength

#### Activities:

- Work / Hobby specific strengthening
- Low impact activities

⌚ Time frames are guidelines. Everyone heals at a different rate. Your progress will determine how quickly you move to the next phase.

#### WHAT TO EXPECT

##### Postop Day 1-5

Surgical pain significantly improves

##### Postop Day 3-14

Meet with therapist to establish PT/OT treatment plan

##### Postop Week 2-3

Follow up appointment and wound check

##### Postop Week 6-8

Follow up appointment and x-ray if necessary.

##### Postop Week 12-16

Follow up appointment, function check and schedule additional appointments if necessary

#### HELP YOUR RECOVERY

##### ICE AND ELEVATE

15-20 minutes, several time per day

##### STAY HYDRATED & EAT WELL

Good nutrition supports healing. Minimize sugar, optimize protein

##### GET QUALITY SLEEP

You body heals while you rest

##### DO YOUR HOME EXERCISES

They are key to your success

##### LISTEN TO YOUR BODY

It's normal to have ups and downs. Pain and swelling should guide your activity level.

#### CALL YOUR DOCTOR IF YOU HAVE:

Fever over 101F

Redness, drainage, or warmth at incision site

Shortness of breath, chest pain, calf pain

Increased pain not relieved by pain medicine

Numbness, tingling or loss of movement in your extremity
